IMMEDIATE RELEASE: SPECIAL TOURS

The University of Illinois will hold its annual Engineering Open House on Friday, March 8, and Saturday, March 9. Over 100 exhibits will be presented by undergraduates of the twelve different departments of engineering. The main purpose of the Open House is to portray to high school students and the general public the ideals of engineering and engineering education. In order to fulfill this purpose, a number of the engineering buildings will be open for inspection and special self-guided tours can be arranged in advance.

Civil Engineering will have its exhibits of the hydraulic laboratory and aerial surveying available for your inspection. Advance reservations can be made for a maximum of 15 visitors.

Advance reservations are also available at the physics building at your convenience for the cyclotron and the undergraduate lab--modern physics and electronics.

If a group wishes to visit any of the above areas, please submit before March 3, 1968, the name and the size of the group, the exhibit, and the preferred time, to Robert Bower, 165 Townsend Hall, Urbana, Illinois 61801 or to Tours, 300 Engineering Hall, Urbana, Illinois 61801.

A tour of the University of Illinois' betatron can be arranged by writing directly to Dr. A. O. Hanson, University of Illinois, Physics Research Laboratory, Stadium Drive, Champaign, Illinois 61820.
